DISTINGUISHED GUEST

Anna Taylor, PhD

Director of the Office of Research Operations and Analysis

National Institute of Neurological Disorders and Stroke, National Institutes of Health

Anna Taylor, PhD, is the director of the Office of Research Operations and Analysis at the National Institute of Neurological Disorders and Stroke (NINDS), National Institutes of Health, where she leads efforts to innovate and coordinate the business operations of the Institute's Division of Extramural Activities in support of the Institute's support of neuroscience research across the United States. Prior to serving in this role, Taylor led the NINDS Grants Management Branch, where she oversaw a group of 30 grants management specialists and team leads with the responsibility of administration and fiduciary oversight of over \$2.4 billion in grant awards. At NINDS, Taylor has led several important activities and programs, including a comprehensive analysis of the Institute's investment in basic and applied neuroscience research; the NIH NeuroBioBank, the nation's premier brain and tissue repository; and the NINDS R35 Program, designed to provide long-term research support for a laboratory's research program. Taylor joined NINDS as an American Association for the Advancement of Science Science and Technology Policy fellow in the Office of Science Policy and Planning, where she cultivated an interest in applying qualitative and quantitative methods to the analysis of Institute programs and expenditures to inform policy decisions and programmatic investments. Taylor earned her BS (1997) and MS (2000) from the University of Central Florida, and a PhD in Neurobiology and Anatomy in 2006 from the Wake Forest University. She conducted her graduate studies under Carol Milligan, PhD, and focused on non-neuronal contributions to motoneuron viability during development and in response to injury. During a brief postdoctoral fellowship, she continued this line of research by identifying proteins that differentially regulate the survival-promoting potential of astrocytes and skeletal muscle.

GRADUATE STUDENT ASSOCIATION FACULTY EXCELLENCE AWARD

Shannon Macauley, PhD, Associate Professor, Physiology and Pharmacology

This award is presented to the faculty member whom the Graduate Student Association has selected as having done the most to promote excellence in graduate education this past year.

Shannon L. Macauley, PhD, Associate Professor of Physiology and Pharmacology, is the 2023 recipient of the Graduate Student Association Faculty Excellence Award. Macauley's commitment to graduate student mentorship, teaching and research scholarship exemplifies the Graduate School's core values, and the University's mission of Pro Humanitate. Macauley has been described as the kind of mentor who "is incredibly committed to the well-being of her students, post-docs and undergraduate students. She is kind and thoughtful, prioritizing the success and well-being of her students above her own." In addition to her incredible commitment to teaching and mentoring, Macauley has been an active citizen at Wake Forest. She has served as a committee member for more than 20 initiatives over the past 5 years, encompassing a wide array of areas. When speaking of her commitment to mentorship and University scholarship, one of her nominators wrote: "Dr. Macauley actively works to make sure that she gives each of us the tools we need to be successful, both in the lab and outside of it." Another nominator wrote: "Not only does Dr. Macauley ensure that her students are successful within the lab, she also strives for her students' success after graduate school." Once again, congratulations to Shannon Macauley, the 2022-2023 Faculty Excellence Award recipient!

GORDON A. MELSON OUTSTANDING DOCTORAL STUDENT AWARD

Brittany Nicole Liebenow, Neuroscience Program

This student has been identified as being outstanding in research, productivity and quality. Although the award is for excellence in the student's research program in general, special emphasis in selecting the recipient is given to the dissertation in terms of originality, importance and potential influence on the student's field. Other factors, which are considered in conferring this award, are academic record, activity in the discipline, as well as university and departmental citizenship. The award's monetary prize is made possible through gifts from alumni and friends to the Gordon A. Melson Outstanding Doctoral Student Award Fund of the Graduate School of Arts and Sciences.

Brittany Liebenow, a PhD graduate of the neuroscience program, is the recipient of the Gordon A. Melson Outstanding Doctoral Student Award for 2023. Brittany has made outstanding contributions to the field of human addiction neuroscience, as detailed in her nomination letters. She is noted for her pioneering work measuring dopamine release in humans with an addiction disorder, supported in part by a prestigious NIH National Research Service Award. This work has resulted in multiple first-authored publications and award-winning conference presentations. Her service to Wake Forest University, the Graduate School and the School of Medicine is also impressive, including her role as a founding member of the Women in Neurosurgery (WINS) Medical Student Committee (where she coordinated the WINS Mentorship Program) and her appointment as student representative of the MD/PhD program. Her record of achievement speaks to her leadership and mentoring qualities, embodying the Wake Forest spirit of Pro Humanitate and exemplifying the highest standards expected of Melson award recipients.

GORDON A. MELSON OUTSTANDING MASTER'S STUDENT AWARD

Keliang Colin Li, Department of Psychology

This student has been identified as being outstanding in terms of academic record, activity in the discipline, as well as university and departmental citizenship. Furthermore, the student's research productivity and quality have been deemed exceptional. The award's monetary prize is made possible through gifts from alumni and friends to the Gordon A. Melson Outstanding Master's Student Award Fund of the Graduate School of Arts and Sciences.

Keliang Colin Li, a master's graduate of the Department of Psychology, is the recipient of the Gordon A. Melson Outstanding Master's Student Award for 2023. His selection was based on a careful review of his credentials and those of the other nominees by the Graduate Council. His record was regarded as superlative for each of the award's criteria. Colin is praised by his nomination letters for his exceptional skills as a researcher, scholar, mentor and departmental citizen. He is described as having dedicated a significant amount of effort and time to prepare for a career as a teacher and scholar, with an impressive list of awards, including the 2022-2023 Psi Chi Graduate Scholarship and the Clara Mayo Grant from the Society for the Psychological Study of Social Issues. Colin's research on "feelings of belonging" among students and ingroup prejudice has led to multiple conference presentations and expected journal articles. As a TA, he is known for his passion and dedication to teaching, with strong evaluations from students each semester. In addition, Colin has provided valuable service for the Society for Personality and Social Psychology's Undergraduate Research Program and the Personal Statement Review Program, showcasing his enthusiasm and leadership qualities. His exceptional scholarly contributions and service exemplify the high standards of the Melson Award.

ACADEMIC REGALIA

Academic regalia apparently originated at Oxford and Cambridge more than 600 years ago. The apparel is little changed in design, colors, and symbolism. In no other sector are the ancient usages of the university so unchanging. In 1895 an intercollegiate commission drafted a uniform code for the use of academic caps, gowns, and hoods in the United States. Over the years there have been only minor revisions to the code, which is followed by 95 percent of the colleges and universities in America, including Wake Forest.

Gowns, which according to the tradition, are all black (Harvard, Princeton, and Yale are exceptions), are of three kinds. The bachelor's gown is a comparatively simple kind that falls in straight lines from an elaborate yoke. The master's gown is similar to the bachelor's except for its peculiar arrangement of the long sleeves with square ends that hang below the elbow. The doctor's gown is an elaborate, full-cut, flowing costume distinguished by velvet panels down the front and around the neck and by three bars of velvet on the bell-shaped sleeves.

The academic hood was literally a garment to protect the wearer from foul weather. It is the identifying symbol of the degree. The length indicates which degree it represents: three feet for the bachelor's, three and a half for the master's, and four for the doctoral. The lining indicates the college or university which awarded the degree. Those who receive degrees from Wake Forest wear hoods lined in old gold and black. The color of the trimming identifies the major field of learning: white for arts and letters, copper for journalism, purple for law, green for medicine, drab for business, pink for music, silver-gray for speech, dark blue for philosophy, light blue for education, sage green for physical education, golden yellow for science, cream for social science, and scarlet for theology.

The Wake Forest University trustees wear black robes with old gold and black on the front panels and the bars on the sleeves. The shield from the University seal is embroidered on the front panels.

Some universities have duplicated colors, but generally a glance at the lining, which is worn exposed, will identify the awarding institution. Some of the university colors worn today are:

Old Gold and Black	Wake Forest University	Crimson and Cream	Indiana University
