

## **Seizure Disorders in the Classroom**

While medication is helpful in managing seizure disorders, a student may still experience seizures during class.

In the unlikely event that a student experiences a seizure during class, please call 911 to alert Emergency Medical Services.

Individuals who experience seizures may have periods of time for up to an hour or two following seizures where academic work is not possible. Please work with any student who experiences a seizure to make up any classwork and assignments delayed because of seizures.
